

Questionnaire 3D-Cadastrres: status November 2010

Germany

This questionnaire is an activity of the FIG working group 3D-Cadastrres 2010-2014. The purpose of the survey is to make a world-wide inventory of the status of 3D-Cadastrres at this moment (fall 2010) and the plans/expectations for the near future (2014). By sharing this information, it should be possible to improve cooperation, learn from each other and support future developments. For more information on the FIG working group on 3D-Cadastrres see the website of this working group www.gdmc.nl/3DCadastrres. Now a few notes and suggestions, which should be helpful when completing the questionnaire:

- In this questionnaire the concept of 3D-Cadastrres with 3D parcels is intended in the broadest possible sense. However, what exactly is (or could be) a 3D parcel is dependent on the legal and organizational context in the specific country (state, province). 3D parcels include land and water spaces, both above and below surface.
- A more formal definition: A 3D parcel is defined as the spatial unit against which (one or more) unique and homogeneous¹ rights (e.g. ownership right or land use right), responsibilities or restrictions are associated to the whole entity, as included in a Land Administration system.
- As the definition above is quite abstract, it is tried in the questions below to be more specific and real world situations are used. Also two example sets of partial/preliminary answers are included from Australia, Queensland and The Netherlands, to support the questions and to be of help when formulation the answers for your jurisdiction.
- A 3D parcel is a 'legal object' describing a part of the space. Often there is a relationship with a real world/physical object, which can also be described in 3D. Please be aware of the difference between these two types of objects and that the focus in the context of 3D-Cadastrres is on 3D parcels (spaces of legal objects).
- If a certain question is not relevant or if you have no clue what to respond, do not spend any time on this (and leave the field blank).

¹ Homogenous means that the same combination of rights equally apply within the whole 3D spatial unit. Unique means that this is the largest spatial unit for which this is true. Making the unit any larger would result in the combination of rights not being homogenous. Making the unit smaller would result in at least 2 neighbour 3D parcels with the same combinations of rights.

1. General/applicable 3D real-world situations

This part of the questionnaire refers to the applicable 3D real-world situations to be registered by 3D parcels. It also addressed the types of 3D geometries, which are considered to be valid 3D representations for these parcels.

	Germany 2010	Germany 2014
1.1. Are all 3D parcels constrained to be within one surface (2D) parcel?	Yes	
1.2. Are ambulatory ² boundaries permitted?	Yes, that is possible at rivers, but only when the movement of the boundary was caused by natural influences and not by manmade actions.	Yes
1.3. Is it allowed to have 3D parcels not related to physical constructs or objects?" (e.g. airspace, subsurface volumes)	If we would introduce 3D parcels we would not restrict them to constructions, since we have a lot of right and restrictions referring to subsurface.	
1.4. Are disconnected parts of a single 3D parcel allowed?	Yes, for 2D rights	No, also not for 2D
1.5. Limitation – e.g. must the 3D parcel be described by a boundary definition?	No. Apartment unit boundaries are generally described in 2D drawings (called "separation plan") as an additional information in the land registry. No rules exist how to draw such a plan. Other rights can also have textual descriptions.	
1.6. Are curved surfaces to bound the 3D parcels allowed?	Yes. There are no restrictions for excluding this.	
1.7. Must the curved surfaces (if allowed) be cylindrical sections, or any other constraint?	No. No restrictions	
1.8. Any other constraints – e.g. all surfaces must be horizontal or vertical?	No	
1.9. Is there generic legislation (law	No	

² An ambulatory boundary is a boundary of a land parcel which follows the movements of a natural feature such as a river. Its position determined at points of time (when a survey is carried out), but between such "fixes", the definition of the property is the position of the real world natural feature.

and/or regulations) for 3D descriptions of parcels? If so please, mention law and article(s).		
1.10. Is the legal text available in original language?		
1.11. Is the legal text (relevant part) available in English translation?		
1.12. Do you have example descriptions of typical 3D parcels; either 'prototype' or 'operational'?	No	
1.13. Is there a formal model for the 3D parcels (UML style); e.g. based on ISO TC211 series?	No, only 2D, but it is based on ISO/TC 211 3D information only applies to buildings, not parcels.	Possible extension to 3D parcels as an option
1.14. Are natural resources (groundwater, mining rights) considered as 3D parcels?	No	
1.15. Are polluted areas considered as 3D parcels (as legal restrictions are associated to these spaces: above and below surface)?	No	
1.16. Are spatial plans considered as 3D parcels (as rights or restrictions are related to them)? Sometimes also called spatial development plans, zoning plans or physical plans (land use, urban, regional, environmental,...)	No	
1.17. Any other geometric issues?	No	

2. Infrastructure/utility networks

This refers to the situation where an infrastructure network is considered to be defined within the cadastre. For example in some jurisdictions, an underground network might be privately constructed for the purpose of leasing space in it for other organisations to run cabling. In this case, a network, or part of that network may be considered to be a real estate object.

	Germany 2010	Germany 2014
2.1. Do you register network parcels? (e.g. subterranean conduit networks)	No. Rights are always related to the parcels	
2.2. If so, can the network structure be traced in the database(s)?	Yes. As specific physical object.	
2.3. Does the jurisdiction have private networks? If so please, mention law and article(s).	Yes	
2.4. If so, are they registered as 3D property parcels?	No. Just a textual description of the rights and restrictions is registered.	
2.5. Is the legal text available in original language? If so, give references to relevant document(s).	Yes. Regulation for land registries and regulation for establishing and maintaining the cadastre.	
2.6. Is the legal text (relevant part) available in English translation?	No	
2.7. Do you have example descriptions of typical 3D parcels for networks; either 'prototype' or 'operational'?	No	
2.8. If the network (legal) objects break at the surface parcel, how do you deal with intersecting networks or vertically parallel networks?		
2.9. Any other geometric issues?		

3. Construction/building units

This refers to 3D properties that are related to constructions and apartment (condominium) buildings. The individual units are often defined by the actual walls and structure of a building, rather than by metes and bounds. E.g. “unit 5 on level 6 of ... building”.

	Germany 2010	Germany 2014
3.1. Do you register 3D construction/building units?	Yes	Yes
3.2. If so, what are the most important types? E.g. apartment units, or also other buildings or even more general constructions (infra related; such as bridge, tunnel or even other, such as windmills,...)	Apartment units	
3.3. Does the jurisdiction have construction/building units? If so please, mention law and article(s).	Regulation for land registries (“Grundbuchordnung” and regulation for establishing and maintaining the cadastre (“Vermessungs- und Katastergesetz”).	
3.4. Is the legal text available in original language?	Yes	
3.5. Is the legal text (relevant part) available in English translation?	No	
3.6. Do you have example descriptions of typical 3D parcels; either ‘prototype’ or ‘operational’?	No	
3.7. What would be typical 3D boundaries in an apartment complex: middle of the wall and floor/ceiling, or walls, floors/ceiling as neutral/shared 3D space?	The unit is defined to the middle of the walls/ceilings.	
3.8. Is common property inside the building registered? If so, how?	Yes	
3.9. Who owns the common property inside the building?	Each party with specific shares.	
3.10. Who owns the land on which the apartment is built?	Each party with specific shares.	
3.11. Any other geometric issues?		

4. X/Y Coordinates

	Your Jurisdiction 2010	Your Jurisdiction 2014
4.1. Do the plans of survey guarantee X/Y coordinates? (and are they relative or in an absolute spatial reference system?)	Yes. Apartments plans can also be based on relative CRS.	
4.2. Are the cadastral database coordinates authoritative?	Yes	
4.3. If not, what is the authoritative source of X/Y coordinates?		
4.4. Do you have parcels defined by the walls of a building (with no recorded geometry)?	Yes, but usually the geometry is recorded or can be derived.	
4.5. What is the spatial reference system for X/Y Coordinates?	Bessel ellipsoid, Gauß-Krüger projection	ETRS89, UTM projection
4.6. Any other X/Y coordinate issues?		

5. Z Coordinates/height representation

	Your Jurisdiction 2010	Your Jurisdiction 2014
5.1. Are the Z coordinates of 3D parcels relative to local ground?	No restrictions	
5.2. Are Z coordinates reduced to a standard datum (absolute)? If so, what is the spatial reference system for the Z coordinate?		
5.3. In principle possible to store both relative and absolute Z coordinate?	Yes	
5.4. Is the earth surface (height) explicitly stored (in the DCDB or other accessible register)?	Yes, but not systematically	
5.5. What is the source of elevation for the 2D surface parcel?		
5.6. Any other Z coordinate issues?		

6. Temporal Issues

	Your Jurisdiction 2010	Your Jurisdiction 2014
6.1. Are temporal limits part of the definition of a parcel (2D or 3D)?	No	
6.2. Are moving parcels allowed?	No. But boundaries can move (see above)	
6.3. Are there any limitations on the range of temporal limits? (e.g. only on 3D apartments).	No	
6.4. Are there any attempt to integrate 3D space and temporal representations, into a single 4D space/time representation?	Yes. The versioning concept that currently applies to 2D	
6.5. In the case of tidal boundaries, what happens to the 3D ambulatory parcel if the 2D land parcel changes extent due to the movement of High Water Mark?		
6.6. Any other temporal issues?		

7. Rights, Restrictions and Responsibilities

	Your Jurisdiction 2010	Your Jurisdiction 2014
7.1. Range of RRR on 3D parcels.	No regulation on that	
7.2. Are there any limitations on the range of rights? (e.g. subterranean parcels must be owned by Govt).	No	
7.3. Any other RRR issues?	No	
7.4. Are there RRRs that are only allowed in 3D (and not valid for 2D)	No	
7.5. Is there specific legislation (laws, regulations) defining 3D RRR types? If so, provide details, e.g. references to documents/ articles.	No	
7.6. Can 3D sub-surface/above-surface parcel be owned by someone other than the person owning the land parcel?		
7.7. What applications do you foresee for 3D cadastre?		

8. DCDB (The Cadastral Database)

	Your Jurisdiction 2010	Your Jurisdiction 2014
8.1. Does the DCDB contain representation of 3D parcels (in any form)?	No	
8.2. If so, how are they represented (in the DCDB)?		
8.3. If so, how are they presented on cadastral “maps” (including screen presentations)?		
8.4. Are there possibilities to store geometry of 3D parcels in the DCDB?	No	
8.5. Is it possible to manage a 3D topological structure in the DCDB?	No	
8.6. Are constraints/rules defined for valid 3D objects (closed volume, no overlap, no gap in 3D)? What about rules for a mix of 2D and 3D representations?	Since we included 3D feature types based on ISO 19107 the same constraints have to be considered	
8.7. How can internal and external user query and visualize the 3D content supporting rotating, slicing, transparency, perspective (3D web/view service, 3D pdf documents,...)?	Not possible	
8.8. What Spatial DBMS software do you use? Any 3D capabilities included and used?	PostgreSQL for 2D. No 3D extension at the moment, but it is foreseen in the data model	
8.9. Do you have any validation rules for 3D representation in the database?	No	
8.10. What (GIS/CAD) software is used for updating, editing, analysis, and visualization of the cadastral data? Any 3D capabilities included and used?	The cadastral authorities use different software. No common approach.	
8.11. What web software is used for remote data access/distribution and visualization? Any 3D capabilities included and used?		
8.12. Is your DCDB organised as Multi-Layers or Object Oriented or some other data model?	Object-relational data base	
8.13. How do you query 3D objects in your DCDB?	Not yet implemented	Filter Encoding

8.14. Is it possible to query neighbourhood parcels to a 3D object, vertically as well as horizontally?	No	
8.15. Any other DCDB issues?		

9. Plans of Survey (including field sketches)

	Your Jurisdiction 2010	Your Jurisdiction 2014
9.1. Do the survey plans carry 3D parcel representations?	Yes, but just basic information (number of floors)	
9.2. If so, how are they represented?	No rules on that	
9.3. Is there specific legislation (regulations) describing the requirements for Plans of Survey in 3D? If so, please give link to the relevant documents.	No	
9.4. Is sketch level allowed (low geometric quality, but in principle enough to indicate the 3D object)?	Yes	
9.5. Is it possible to define a 3D parcel by referring to other 3D real world objects/ topography (and not specifying coordinates)?	No	
9.6. In what format are the 3D parcels submitted for registration; attached to legal document in a single pdf (which has good 3D capabilities) or in an extension of (city)GML for 3D parcels, or....?	Currently XML/GML	
9.7. Are the 3D parcels somehow checked for spatial validity; e.g. volume is closed, does not overlap with neighbour volume (and also no unwanted 3D gaps)?	No	
9.8. Do you have examples of (prototype or production) 3D survey plans available?	No	
9.9. Are any reference objects visible on the survey plan (e.g. real buildings, roads, that is 3D topography)?	No	
9.10. What form of 3D data acquisition is used (CAD, terrestrial surveying, sketches, stereo/oblique images, laser scanning,...)?	Terrestrial surveying, laser scanning	
9.11. What software do you use for creating and processing survey plans? Any 3D capabilities included and used?		
9.12. Can 3D parcels be subdivided, consolidated or nullified?		
9.13. Is there any existing technical circular or directive to assist		

Surveyors in 3D data collection in the field?		
9.14. Any other survey plan issues?		

10. Other Issues

Please include any other issues that may be of interest in an international context. For example, in some foreign jurisdictions 3D parcels can only be separated by horizontal planes.

	Your Jurisdiction
10.1. Country (State, Province)	Germany
10.2. Your name, function/position and your organization	Markus Seifert Head of SDI office in Bavaria Head of the working group for developing the new cadastral data model (AAA application schema)
10.3. Contact details: address email, telephone	Landesamt für Vermessung und Geoinformation, Alexandrastr. 4, 80538 München, Germany Markus.Seifert@lvg.bayern.de 0049 173 8633042
10.4. Other issues
